Objective

To make the undergraduate students acquainted with the fundamental concepts of linear algebra and its application in computer science and engineering.

Course Description

This course covers matrix theory and linear algebra, emphasizing topics useful in other disciplines. Linear algebra is a branch of mathematics that studies systems of linear equations and the properties of matrices. The concepts of linear algebra are extremely useful in image processing, computer vision, data science, machine learning, bio-informatics, social networks, and neuroscience. Due to its broad range of applications, linear algebra is one of the most widely taught subjects in college-level mathematics.

References

Our main reference which we recommend you to read is [3]. We are extremely grateful to the authors of [1, 2, 4, 5] for the benefit we got from them in compiling the program of this lesson.

Classes

The classes will be held in person on Sunday and Tuesday from 10:30 AM to 12:00 PM in Education Tower Class 205. In special circumstances, virtual classes will be held on https://vc.sharif.edu/ch/rabiee. Schedule of the classes is available in the appendix. If a class is canceled by students, that class may be considered as completed in the continuation of the curriculum.

TA Classes

TA classes will be held in person on Tuesdays from 12:00 PM to 1:15 PM approximately every other weeks. Schedule of TA classes is available in the appendix.

- Problem solving classes: Classes to solve additional questions will be held approximately every other week during the semester.
- Exams Exclusive classes: In particular, for each of the midterm and the final exam, a TA class will be held so that students can prepare adequately for the exam.
- Python workshops: For those students who are not familiar with Python and its related libraries, four workshop classes will be held to learn Python, NumPy, visualization libraries, and PyTorch.

Exams

Students' learning will be assessed by a midterm and a final exam. These exams will be held on the following dates and students are required to participate in them. Note that the final exam is comprehensive.

• Midterm Exam: 1401/02/21 9:00 AM

• Final Exam: 1401/03/23 9:00 AM (As Schedule in Edu, Comprehensive)

Homework Assignments

Six series of homework assignments will be released in this course. The first five series of assignments include a theoretical part and a practical part with grades of 1.40 points and 0.32 points, respectively. The last series only includes a theoretical part with grade of 1.40 points. Assignments will be released on Tuesday midnight every two weeks. Students will have 12 days for the theoretical part and 14 days for the practical part to submit answers in the Quera. Regarding the late submission policy, students are allowed to submit answers of the theoretical part and practical part with 5 days of delay. 15 days of delay will be ignored in way to minimize your loss. After that, 0.5% of the assignment grade will be subtracted for each hour of delay. Consider that grading of the theoretical part and practical part of an assignment is separated and delay in each of them will be calculated separately. For example, one day of delay in the practical part and two days of delay in the theoretical part of an assignment will be considered as three days in ignoring that 15 days and subtracting that 0.5%. In other words, you can consider the theoretical and practical parts as two separate assignments in grading. Delays will be calculated on a scale of hours. It's obvious that submission after related TA class to that assignment is forbidden.

Grading

Please note that grades will be calculated out of 24.5.

• Homework Assignments: 10 points, first five series with 1.40 points for theoretical questions and 0.32 points for practical questions, last series with 1.40 for theoretical questions.

• Final Project: 1 point

• Midterm Exam: 5 points, 1401/02/21 9:00 AM

• Final Exam: 6 points, 1401/03/23 9:00 AM (As Schedule in Edu, Comprehensive)

• Random Quizzes and Class Activities: 2 points,

• Take-home Examples: 0.5 point

Statement on Collaboration, Academic Honesty, and Plagiarism

We encourage working together whenever possible on homework, working problems in tutorials, and discussing and interpreting reading assignments. Talking about the course material is a great way to learn. Regarding homework, the following is a fruitful (and acceptable) form of collaboration; discuss with your classmates possible approaches to solving the problems, and then have each one fill in the details and write her/his own solution *independently*. At the top of each homework you turn in, we expect you to briefly list all sources of information you used, except known course materials like Text Book, Lectures, etc. A brief note such as "Did homework with ABC and ACB in study group" or "Looked at old solution for Problem 4" would be sufficient. Besides the morality issues, it will help TAs on grading your hand outs. There will be a zero tolerance policy for Cheating/Copying HW's. The first time you are caught, you will receive a -100% of grade for the task at hand. If you are caught for a second time, you will fail the course. Refer to the Education Committee's statement on homework etiquette.

Feedback

We would be grateful if you could send us your valuable feedback. You can contact instructors or even TAs via email. You can also use this google form (https://forms.gle/ajiQ9v4XxxUEXepQ6) to send your feedback anonymously to instructors.

Course Pages

- Jabrekh, https://jabrekh.github.io/: This is the main page of our course and all exercises, slides and course resources will be placed in it.
- Quera, https://quera.org/course/13072/: Delivery of exercises and announcements will be done entirely through Quera. Make sure you enter an email on Quera that you check regularly. Your questions from the exercises will also be answered in Quera.
